CAT P is a polled bull from a very deep cow family that can boast high lifetime productions and high ratings over several generations. The hereditary profile of CAT P promises offspring with good production, high protein percentages, good milkability with an average cell count and a very appealing conformation. The cymbal structure is particularly impressive at 103, with wide, long, perfectly sloped cymbals and centrally placed reverses. The pasterns are tight and the hind leg angle is a bit steeper. The udders are high and firmly attached, while the slightly longer teats are optimally placed. The births are average.
