Madoc P

MADOC P, the Mailand son from a cow family with very good production and high components, has a very fitness-oriented heredity profile in addition to his interesting aAa code 462. With 129 ÖZW and excellent breeding values for fertility, persistence, udder health, longevity with average milking speed, Madoc P promises trouble-free farm cows with a high level of performance. The calving ease number also makes him suitable as a partner for heifer insemination. The linear profile means that animals of average size with good rump position and strong feet and legs with high heels can be expected. The udders will be attached high and have a pronounced suspensory ligament. Teat length and placement fit for AMS.
