NH Boston PP Red

GM: NH Indira P RF VG-86

Boston PP Red is not only homozygous polled and comes from the successful India P EX-90 family of the Nosbisch breeding company, but is also particularly interesting for Red Holstein breeding, as there is not a single red animal in the complete 3-generation pedigree and he therefore has one represents a real alternative in blood circulation. The first Boston PP Red heifers are now in milk and appear as medium-sized, very youthful-looking animals with arched, medium-deep ribs, broad, level rumps and good feet and legs, the hind legs are in a straight line and show an optimal angulation. The firm, high attached udders milk out very well and the longer teats are centered under the quarters. Performances are in the mid 30's and persistence appears to be very good. Boston PP Red tests beta-casein A2/A2.
