Mojo PP RC is an early Mo Red son and descends from a daughter of the internationally very successful bull sire Pikachu and full sister of the performance sire Pacco P. Mojo's sire lines make him an outcross sire for polled breeding, so that he can be used on the majority of the offspring of the P sires used in Germany. In line with his pedigree, Mojo himself convinces as a performance sire with high components, positive daughter fertility, high longevity and consistently positive health values. In terms of conformation, Mojo can be expected to produce offspring of moderate size, with slightly sloping rumps, parallel legs and high, firmly attached udders with longer teats. Mojo can be used well on heifers, is suitable for AMS farms and tests beta-casein A2A2.
